Solution Architecture:

Solution Architecture is a complex process with many sub processes that bridges the gap between business problems and technology solutions.

The project aims at building an application that provides information about the containment zones of a particular region by continuously monitoring an individual's location. The location of the individual must be stored in the Database. Alerts are sent using the notification service.

It's goals are:

➢ Find the best tech solution to solve existing problems

➢ Describe the structure , characteristics, behaviour and other aspects of the software the project take holders.
➢ Define the features,development phases, and solution Requirement.
➢ Provides specification according to which the solution is defined,managed and delivered.
